BCS CONSULTING
Part of **Accenture**

Technology & Digital Data Enablement

Principal Consultant

BCS Consulting, part of Accenture – What we do

BCS Consulting, part of Accenture, sits within Accenture's Financial Services Strategy, and Consulting function in the UK, and was recently acquired by Accenture to strengthen their U.K. Financial Services Consulting and Technology Services Capabilities (Accenture Acquires BCS Consulting to Strengthen its U.K. Financial Services Consulting and Technology Services Capabilities | Accenture).

We're committed to delivering excellence and that's why world leading financial services businesses rely on us to bring about effective change within their organisations.

Our portfolio includes a varied and interesting range of multinational and UK banks, Wealth and Asset Management companies, Insurance firms and payment and card companies.

As a team of experts, we understand the importance of building on firm foundations and that's why you'll always find a broad range of core management consulting skills at the heart of our organisation.

The opportunity

BCS Consulting, part or Accenture, are looking for a candidate who can join our Technology and Digital service line with a specific focus on Data Enablement. The role is an essential component of Consulting teams helping clients to implement effective architectures and derive greater value from their data assets. The candidate will have extensive experience in the **design and build of data-intensive applications, end-to-end data pipelines and data analytics solutions**, while themselves being familiar with data analytics practices and toolsets. The role is for experienced self-starters who can lead cross-functional teams and fits the profile of someone who has the drive and desire to work in a fast paced and dynamic consulting environment

This is a unique opportunity to help bolster our credentials with our clients, be part of industry fronting change and developing within a specific expertise area. Your knowledge in consulting and in this specific area will enable you to not only build our portfolio and market presence, but also help to develop and grow the team internally.

At BCS, part of Accenture, your career matters, that's why we invest in training and development, so alongside your day-to-day role you will have access to amazing development opportunities allowing you to direct your career progression.

Responsibilities

You will be required to:

- Work on varying projects to deliver outcomes for clients with a strong emphasis on data enablement, managing risks and issues as they arise
- Provide industry experience, knowledge and understanding of technology in general and specifically data management
- Produce content which communicates insights and recommendations to clients at varying levels of seniority and technical literacy
- Articulate and interpret business and technical requirements on behalf of clients
- Lead client engagements/ workstreams, managing successful delivery to client satisfaction
- Proactively develop client relationships to create additional business opportunities
- Identify, drive and develop new opportunities based on your specific areas of expertise
- Take a leadership role in the expansion of the commercial proposition and its associated services (including creation and maintenance of Intellectual Property)
- Manage and mentor Consulting employees

Skills

You will have the ability to:

- Work with a range of popular data technologies including relational and non-SQL databases, ETL and data preparation solutions and metadata management tools, drawing on existing experience to learn new toolsets quickly
- Define and interpret data models at varying levels of abstraction to communicate data concepts precisely to technical stakeholders
- Define / create BI reports using data visualisation tools and techniques (e.g., QlikSense, Tableau)
- Conduct data analysis including data mining and use of statistical methods to inform decision making
- Manage data quality controls and remediation of data quality issues
- Advise clients on data tooling and technical integration questions based on prior experience
- Pick things up quickly and have the desire to learn new methods
- Deal with external and internal stakeholders
- Present complex technical information clearly to non-technical colleagues
- Build strong trusted working relationships with business partners at various levels

Experience

- STEM Degree or equivalent such as Computer Science, Software Engineering, Data Analysis or Statistics
- 5+ years' experience in relevant positions (Data Analyst, Technical Project Manager, Solution Architect)
- Proficient in SQL
- Familiarity with one or more high-level programming languages
- Experience in defining data transformations using one or more common ETL tools
- Experience in the development of BI reporting/visualisation using industry-accepted BI tools (e.g., QlikSense, Tableau, Power BI)
- Experience with industry-standard delivery tools (Jira, Confluence) and techniques (agile delivery)
- Experience in/knowledge of Financial Services
- Experience of managing consultants and developing them in their careers
